Introduction

I have held the same position at Storm Creative for a couple of years and I am now looking to progress my career further. From a young age I had always wanted to be a Web Designer. As I progressed through my career I developed a flair for Frontend development, this has allowed me to have creative input from start to finish. I'm extremely passionate about everything I produce and always put in the maximum effort.

Tools I use on a daily basis

Github, Gulp, Webpack, npm, Compass, Laravel, custom MVC frameworks, Wordpress, campaign monitor, litmus, email on acid, mailchimp, Photoshop, Illustrator, Google web Developer, Browserstack & Trello.

Creative Experience & skills

HTML, CSS & Javascript

I work to a high standard and everything I code goes through multi platform testing including devices and web browsers in some cases back to ie8. I compile my css with gulp and recently started using webpack for js bundling.

Laravel/custom (2015 - 2018)

Most recently I have been working with laravel as a framework. Since my skillset is more with frontend development I've found the community for this framework incredibly helpful.

Wordpress (2012 - 2015)

I consider my Wordpress knowledge to be a strong attribute. I have built a variety of custom themes using Wordpress with plugins such as woocommerce.

Emails: campaigns, coding & marketing

My email development skills are particularly strong building custom html emails for clients using mailchimp and campaign monitor.

Photoshop & Illustrator

I have Created countless graphics for companies for both web and print based media.

HTML5 Ad banners / Animation

I have built and animated many adsense adverts using google web designer. I also have some knowledge using After effects to create animations.

Past work

Storm Creative (2015 - June 2018) <https://www.stormcreative.co.uk/>
